

VARIOCLEAN P 7006 AND 7013

Cleaners for Pad Printing

1. PROPERTIES

VARIOCLEAN P 7013 is a special cleaner for the cleaning of silicone pads as used in the pad printing industry. The product has a mild odour and a **flash point of 13°C**. The effective solvent is developed to remove ink hazes and similar residues from the sensitive silicone pads. The application is purely manual.

We recommend using a clean cloth, which is soaked with the **VARIOCLEAN P 7013** to apply the product. Please do not use paper tissue, since the effect is very abrasive and paper tissues leave paper residues on the silicone pad.

VARIOCLEAN P 7006 is a special cleaner used in the pad printing industry for the manual cleaning of all tools used around the machine, such as the ink well, the doctor blade, closed ink cups, etc., so all parts and pieces that contain ink. The product has a mild odour and a **flash point of 43°C**. The effective solvent is developed to remove inks and related residues from tools and parts of a pad-printing machine, with the exception of the silicone pads. The application is purely manual. We recommend using a clean cloth or cleaning tissue, which is soaked with the **VARIOCLEAN P 7006** to apply the product.

VARIOCLEAN P 7006 contains aromatic hydrocarbons but not any chlorinated solvents or toxic organic substances that are classified in the legislation for hazardous substances and list of maximum workplace concentrations as damaging to embryos or genetic substance.

Safety and pollution related data can be obtained from the respective *SDS* according to guidelines 1907/2006/EC.

2. APPLICATION

Please note that workplaces for manual and automatic cleaning have areas (site of installation) where occasionally hazardous explosion atmospheres can exist (= zone 1), when cleaners with a flash point below 60°C are used.

The well trained **SPT** service technicians offer competent and customer friendly assistance, fast and reliable.

3. PACKAGING - STORAGE

Both products are packaged in standard 1 L, 5 L and 20 L cans plus 200 L drums.

The cleaner has to be stored in a dry and against frost protected place at ambient temperature and never expose these products to temperatures of more than 40°C or to direct sun light.

Our technical advice whether spoken, written, or through test trials corresponds to our current knowledge to inform about our products and their use. It is not meant as an assurance for certain properties of the products nor their suitability for each application. You are, therefore, obliged to conduct your own tests with our supplied products to confirm their suitability for the desired process or purpose. The selection and testing of products for specific final application is exclusively your responsibility.
